## CMPE 350 - Spring 2017

## PS 6-22.03.17

2.26 Show that if $G$ is a CFG in Chomsky Normal Form, then for any string $w \in L(G)$ of length $n \geq 1$, exactly $2 n-1$ steps are required for any derivation of $w$.
2.5 Give informal descriptions and state diagrams of pushdown automata for the languages in 2.4.
2.18 a) Let $C$ be a context-free language and $R$ be a regular language. Prove that the language $C \cap R$ is context-free.
b) Use part a) to show that the language $A=\left\{w \mid w \in\{a, b, c\}^{*}\right.$ and contains equal number of $a$ 's, $b$ 's and $c$ 's\} is not a CFL.
2.44 If $A$ and $B$ are languages, define $A \diamond B=\{x y \mid x \in A$ and $y \in B$ and $|x|=|y|\}$. Show that if $A$ and $B$ are regular languages, then $A \diamond B$ is CFL.

- Prove that there are infinitely many context-free languages which are non-regular.
